

# Welcome to Hokkaido, the dairy kingdom!

## 1. Hokkaido's raw milk production ranks first in Japan

Hokkaido is a dairy farming kingdom that boasts approximately 60% of the raw milk production in Japan.

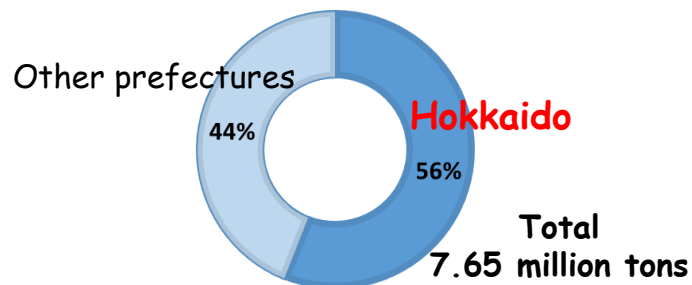

This is because Hokkaido has a cool climate, which provides a comfortable environment for dairy cows.

Raw milk, which is the raw ingredient for dairy products, is made from dairy cows, of which most in Japan are of the Holstein breed with black and white patterns, and are characterized by being resistant to cold and weak to heat.

Producing raw milk also requires a lot of pasture for the cows to eat.

One of the reasons why dairy farming is so popular is that Hokkaido has a vast amount of land, so dairy farmers can grow high-quality pasture by themselves.

Raw milk production in Japan(2022)

## 2. Milk in winter is delicious!

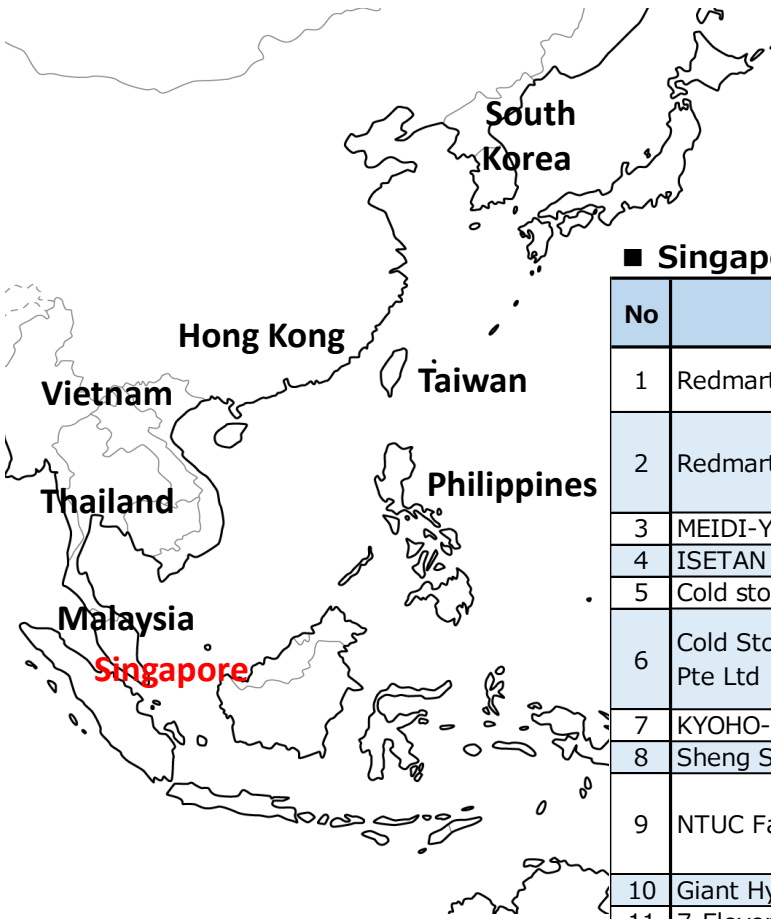

Dairy cows are creatures that prefer cool climates, so in the summer, the amount of raw milk produced decreases due to the effects of high temperatures.

Everyone!  
Please try drinking milk from various dairy manufacturers during your stay in Hokkaido.

We have posted the shops where you can buy Hokkaido milk on the next page, so please enjoy delicious Japanese milk in your area.
